

Jigamy Campground

Sustainability Action Plan

Our Sustainability Commitment

At Jigamy Campground, we are committed to operating in a way that protects the natural environment, reduces our emissions, and provides our guests with a sustainable and responsible camping experience.

From the beginning, sustainability has been a key consideration in the design and operation of our campground. We have invested in renewable energy, responsible water management, and environmentally conscious systems to minimise our impact while allowing guests to enjoy the surrounding environment.

We recognise that sustainability is an ongoing journey, and we are committed to continually improving our practices and identifying new opportunities to reduce our environmental footprint.

Renewable Energy and Emissions Reduction

Our campground operates completely off-grid through the use of solar energy and battery storage systems. This allows us to significantly reduce reliance on traditional energy sources and minimise operational emissions.

Our renewable energy infrastructure currently supports the campground's operations, providing guests with a comfortable experience while maintaining a low-impact approach to energy use.

As part of our ongoing sustainability journey, we plan to continue expanding our renewable energy capacity, with the long-term goal of making the entire site, including office and operational areas, fully off-grid.

Responsible Water Management

Water conservation is an important part of our sustainability approach.

We have installed rainwater tanks to capture and store water, reducing reliance on external water supplies and supporting responsible water use across the property.

Our wastewater is managed through an on-site septic treatment plant. Treated water from this system is reused for irrigation, allowing us to responsibly manage resources while supporting the health and maintenance of the surrounding landscape.

Environmentally Responsible Cleaning Practices

We use cleaning products that are compatible with our septic treatment system. This helps protect the effectiveness of our wastewater management processes and reduces the introduction of harmful chemicals into the environment.

By choosing environmentally responsible products, we aim to maintain high standards of cleanliness while reducing our ecological impact.

Our Current Sustainability Focus

As a newly established campground, we are continuing to monitor our operations as guest numbers grow. We have not yet experienced a peak season, so we are taking a proactive approach by observing resource use, identifying potential challenges, and adapting our practices as required.

Future monitoring will help us better understand areas such as:

- Energy consumption
- Water usage
- Waste generation
- Guest impacts during high occupancy periods

This information will guide future improvements and help us set measurable sustainability targets.

Expanding Renewable Energy

Our next major sustainability goal is to expand our solar and battery systems so that the entire property, including offices and operational areas, can operate independently from the grid.

This will further reduce emissions, increase energy resilience, and strengthen our commitment to renewable energy.

Measuring and Reducing Our Environmental Impact

As our business grows, we will continue to assess our environmental performance and identify opportunities to reduce emissions through:

- Improved energy efficiency
- Increased renewable energy generation
- Responsible resource management
- Ongoing review of operational practices

Protecting the Natural Environment

We are committed to protecting the natural environment that our guests come to enjoy.

Our approach includes responsible land management, careful use of resources, and ensuring our operations work in harmony with the surrounding landscape.

Guest Involvement in Sustainability

We believe sustainability is something we can achieve together with our guests. We aim to encourage visitors to participate through simple responsible practices, including:

- Respecting the natural environment
- Conserving water and energy
- Minimising waste
- Following campground recycling and environmental guidelines
- Supporting responsible outdoor recreation

By sharing our sustainability practices with guests, we hope to inspire greater awareness and encourage environmentally responsible travel.

Our Ongoing Commitment

Sustainability is not a one-time achievement; it is an ongoing process of improvement. At Jigamy Campground, we are committed to continuing our investment in renewable energy, responsible resource management, and environmentally conscious operations. We will regularly review our practices, identify new opportunities, and continue working towards reducing our emissions and environmental impact. Our goal is to provide guests with an exceptional camping experience while protecting the natural environment for future generations.
